Overview

Now we know what caused the alarm! The award-winning OzVision products send visual information right to you and your monitoring station. Monitoring stations that were once blind to what was happening can now see – before, during, and after the alarm triggers. OzVision's affordable yet powerful solution has already helped apprehend criminals, save lives and reduce false alarms.

But the possibilities go far beyond video alarm verification. Using OzVision, you can easily keep track of what's happening at your home. You'll immediately receive a video email of any non-emergency event – right to your inbox. Whether it's seeing your kids come home from school or knowing when someone opens the liquor cabinet, the OzVision video clip comes as an attachment that is easily opened and played. Of course there are also times that you just want to check in on your home. Simply log-in and view cameras at anytime.

Key Benefits

- Video alarms give police, fire officials, and YOU more information
- Your monitoring station is waiting for these videos 24-hours a day
- Video alarms help apprehend criminals while the crime is in progress
- A video clip of an emergency event can help save lives
- Video alarms help minimize false alarms and fines
- Video services keep critical visual information off site and in safe hands
- You'll have instant video access to multiple locations
- No PC is required on site
- Monitor your home from anywhere.
- Enjoy the peace of mind of having professionals manage your video
- Verified alarms save time and money

Applications

Video Verification

Municipalities across the country have adopted ordinances to address the false alarm issue, and many have gone as far as requiring verification prior to police being dispatched. Your monitoring station will receive a video clip of what happened before and after the alarm was triggered, allowing dispatchers to have a quick, accurate assessment of the event. If there had been no video of this alarm event, the police may have been called – pulling valuable resources from more needed areas and possibly levying fines.

Event Notification

Are you at the office or on the road and can't be home when your child returns from school? Give yourself the peace of mind you deserve, knowing that your child has returned home – safe and sound with OzMail video email notification. You'll receive an email clip right to your PC or even to a Pocket PC. Worried about the size of the file? No need. With OzVision's patented compression, the file size is unbelievably small and yet the quality remains high.

Scheduled Virtual Visits

Easily schedule video tours of your home. The video email clip is either sent to you (without operator involvement) or viewed by the central station). For instance, if you have a vacation home you could get a video update twice a week emailed to your computer or PDA. The video clip is time and date stamped with a scan of each of the onsite cameras.

Remote Video Access

Are you at work and want to check on your home? Check in from anywhere and at anytime – all you need is a computer and phone line. Log-in using the OzVision software to make sure that both your home and family are okay.

Hardware Benefits

- ▶ **Pre and Post Video**
Ozline products can transmit Pre and Post video alarms, which allow the monitoring station to see what happened before and after the alarm occurred.
- ▶ **Seamless Integration**
Unit connects any camera system to any alarm panel to provide video services such as Video Alarm Verification, Video Email Open / Close Reports and Scheduled Video Tours.
- ▶ **No Computer Required On-Site**
All that is needed at the location is the OzVision unit and a phone line.
- ▶ **Built-in Modem**
No need to connect any other external modems or dialers.
- ▶ **No Need for Special Cameras**
No need for special cameras, OzVision integrates with most CCTV equipment.
- ▶ **Video Line Supervision**
When the OzVision unit detects a video loss, it transmits the signal to your monitoring station.
- ▶ **Built-in Sequential Switching**
Connect unit to a monitor and provide video switching between cameras on-site.
- ▶ **Viewing Software Included**
Install the OzVision software on as many computers with no need to pay any licensing fees.
- ▶ **Share Existing Phone Lines**
A special call-back feature allows you to share a line with a fax machine.
- ▶ **Cellular Transmission**
Transmit video using cellular phones and modems for new mobile applications where standard telephone or Internet is not available.
- ▶ **Remote Activation**
Remotely control lights, open garage doors and trigger buzzers.
